Forecast for Friday 20 Aug 2021

Weather: Damp and extensively cloudy at first, with cloud on windward ground likely to give periods of light rain and drizzle. Limited clearer intervals developing further east may lead to a few valley mist and fog patches. Friday daytime should be rather damp and cloudy throughout, and while cloud should lift clear of the summits for a time, brighter interludes are likely to be in short supply. Becoming more extensively cloudy into the evening, with cloud descending and further periods of rain arriving.

Chance of cloud free mountain/hill tops above 600m: Near-nil at first, with cloud down to valley floors on windward ground. Slowly improving to 60% later in the afternoon before deteriorating again to near nil into the evening.

Visibility: Often poor, improving to good for a time as low-level mistiness disperses, but deteriorating into the evening.

Meteorologist's View

Nothing to add.

Recent rainfall: measured at Malham: altitude 375m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
02:00 on Thu 19 Aug 2021	1.4mm	8.6mm	10.2mm

Forecast for Saturday 21 Aug 2021

Weather: Potentially a cloudy and very wet day, although low confidence on rainfall detail in particular at present. Relatively light winds and the potential for persistent rain are likely to mean extensive and persistent low cloud, with correspondingly poor visibility and difficult navigation. Limiting activities to the lower slopes is advised.

Maximum wind: 20mph, varying direction.

Chance of cloud free mountain/hill tops above 600m: Near nil.

Visibility: Poor.

Temperature: **Valleys:** Plus 12 becoming plus 18 degrees Celsius.
At 600m: Plus 13 degrees Celsius.
Freezing level: Well above the peaks.
